For Immediate Release

**The ROAN Group, Inc. (TRG) ANNOUNCES A NAME CHANGE FOR ITS
NEWLY MICROENCAPSULATED NUCLEOTIDE PRODUCT**

ENCAPCELL, a new, patent pending encapsulated nucleotide formula for preventing disease and enhancing growth, is now available through The ROAN Group, Inc. (TRG)

Acampo, Calif. – May 8, 2006 – In February 2006, at Aquaculture America held in Las Vegas, NV, The ROAN Group, Inc. launched its new nucleotide product called ENHANCE. It has since been brought to our attention that a potential conflict could exist between our product and another, unrelated product. Therefore, TRG has renamed its new microencapsulated nucleotide product *ENCAPCELL*, to avoid any possible conflict. As a result of this potential conflict TRG has notified both their customers and prospects in the aquaculture marketplace about *ENCAPCELL*. The product, when fed in the normal diet from first feeding until harvest, dramatically reduces disease and improves growth rates.

When an animal is attacked by disease it requires both time and energy to mount a significant defense during which time symptoms appear and are likely to produce mortalities. The oral supplementation of *ENCAPCELL*, prior to the onset of disease, reduces both the energy and the time it takes for cell proliferation in the organism and accelerates the antibody production.

The effect of the encapsulated nucleotides found in *ENCAPCELL* on the cellular immunity is to accelerate the production of antibodies, which contributes to the overall health of the animal. *ENCAPCELL* also aids in the general development and growth of the animal by maintaining a healthier animal. Further, *ENCAPCELL* aids in the feed conversion ratio to lower crop costs and improve water quality,

About The ROAN Group, Inc.

TRG, founded in 2004, is the world's only provider of encapsulated nucleotide based health solutions. With ongoing research and testing aimed at combating various mortality producing diseases, ENCAPCELL, the first product release from TRG targets the aquaculture market. ENCAPCELL allows those crops that are normally stricken with these disease conditions to better resist disease and enhance growth rates at the same time.

**TRG RELEASES NEW ENCAPSULATED NUCLEOTIDE PRODUCT
FOR IMPROVED DISEASE RESISTANCE AND GROWTH**

ENCAPCELL™, a new, patent pending encapsulated nucleotide formula for preventing disease and enhancing growth, is now available through The ROAN Group, Inc. (TRG)

Acampo, Calif. – February 08, 2006 – The ROAN Group, Inc., the manufacturer of **ENCAPCELL™**, an encapsulated nucleotide based formula that reduces and/or eliminates symptoms of disease and also aids in cell proliferation to combat disease stressors that leads to less profitable crops and/or crop loss, is now launching their **ENCAPCELL™** product into the aquaculture marketplace. The product, when fed in the normal diet from first feeding until harvest, dramatically reduces disease and improves growth rates.

When an animal is attacked by disease it requires both time and energy to mount a significant defense during which time symptoms appear and are likely to produce mortalities. The oral supplementation of **ENCAPCELL™**, prior to the onset of disease, reduces both energy and the time it takes for cell proliferation in the organism and accelerates the antibody production.

The effect of the encapsulated nucleotides found in **ENCAPCELL™** on the cellular immunity is to accelerate the production of antibodies, which contributes to the overall health of the animal. **ENCAPCELL™** also aids in the general development and growth of the animal by maintaining a healthier animal. Further, **ENCAPCELL™** aids in the feed conversion ratio to lower crop costs and improve water quality.
